Autofill FAQs

Q: How do I disable the Bitwarden accessibility bubble?

1. Open the **Settings** in your android device.
2. Navigate to **Accessibility**.
3. Select **Bitwarden**.
4. Turn off the toggle for Bitwarden shortcut.

Q: Can I autofill on a split login-workflow?

A: Split login workflows (for example, when username and password fields are displayed on separate screens) can be autofilled by Bitwarden browser extensions, but not currently by mobile apps.

Q: Can I use autofill while using a physical keyboard on an iPad?

A: Yes! To use autofill while using a physical keyboard:

1. Open the iOS  **Settings** app on your device.
2. Tap **General**.
3. Tap **Keyboards**.
4. In the All Keyboards section, toggle **Shortcuts** on.

Q: How do I disable Google Autofill in my Android device?

A: To disable Google Autofill on your Android device:

1. Open **Settings** in your Android device.
2. Scroll down and tap on **Google**.
3. Tap on **Autofill with Google** and toggle it off.

Q: What do I do about 'Biometric unlock disabled pending verification of master password'?

A: This most commonly occurs on iOS when you make a change to your device's biometrics settings (for example, adding another finger to Touch ID). To resolve this error:

1. **If you have [PIN Code verification active](#)**, disable it.
2. Log out of your Bitwarden mobile app.

3. Check that your device settings are [setup to use Bitwarden for autofill](#).
4. Log back in to your Bitwarden mobile app.
5. Re-enable [PIN code](#) verification if you want to use it as a backup for [biometrics](#).

Q: Does URI matching not work with certain websites when Base Domain is the set rule?

A: Some results that would typically match have been filtered out because the URL you are currently on may serve multiple websites. To learn more about these websites, see publicsuffix.org.
